

Shelter Project Presentation

Activity Description

You've completed your configurations in response to the brief, now you need to develop a presentation ready to deliver to the aid agency.

Your presentation is your opportunity to demonstrate how and why your configuration is suitable for the identified need.

Steps

1

As a team discuss the objects which you chose to include in your configuration and what the benefits are for the people in need.

Consider how you can best explain your choices and their relevance to the needs of the brief.

Consider points at which you had to make difficult choices on what to include and how you came to the end decision.

If any objects have any negative points which might be of concern to your aid agency, how will you justify these?

Use the Presentation Planning Sheet to support you in this process.

2

Enter the Gallery and consider the path that you will take as you take the Aid Agency on the tour of your proposed configuration.

3

Create a commentary for the tour, considering relevant information to include as well as what the experience will be like for the Aid Agency to whom you are presenting.

4

Consider roles for the presentation bearing in mind the skills of the team members keeping in mind the experience for the Aid Agency.

Who will undertake which roles, if roles are to be shared, perhaps for the commentary, how will the task be shared?
